

ABOUT

Think City's Green Transformation Programme aims to address social, environmental and sustainability issues by incorporating green rooftops, vertical gardens and green infrastructure in both the private and public realm. Through this programme Think City aims to change perceptions about the way we see green space – by innovative use of underutilised rooftops and walls for greening and to encourage the use of alternative energy.

Think City will provide building owners an opportunity to initiate a pilot project within the historic core of downtown Kuala Lumpur, specifically within a 1km radius of Masjid Jamek. The pilot programme intends to provide funding and facilitate the transformation of any potential walls and rooftops. This is open to all building owners that aim to reactivate dead spaces with green initiatives that will soften the urban landscape and increase public exposure to greenery.

HOW TO APPLY

The application process will comprise of 4 stages:

- (1) The applicant is required to submit an email of interest with details of the building – location, age and type of building (eg shophouse), a brief description of the current state and use of the rooftop or wall. Photographs will be very helpful.
- (2) A first meeting between Think City and the applicant, on site.
- (3) Engineering assessment to examine the feasibility.
- (4) Implementation of project.

Criteria for selecting suitable sites:

- Preference given to publicly accessible spaces.
- Suitable access to rooftop.
- Impact on the community, and potential to be catalytic in nature.
- Sufficient documentation about the site (e.g engineering report, floor plans)

TERMS & CONDITIONS

All applications must be received by 2 July 2017.

Think City reserves the right to display project process and completion details on their website and/or other medium.
